prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa drugs, as templates for recombinant components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABO67826-ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at

New nucleic acid molecule encoding a cell proliferation-related polypeptide, useful for modulating cell proliferation, senescence, differentiation, development, and stress response in plants, and for producing enhanced food crops.

Claim 28; SEQ ID NO 130; 408pp; English.

encoding a cell proliferation-related polypeptide. The nucleic acid molecule and the encoded polypeptide, and methods are useful for modulating cell proliferation, senescence, differentiation, development, and stress response in plants, and for producing enhanced food crops. The present sequence represents a cell proliferation-related polypeptide. The present sequence is published separately from the main body of the specification present invention relates to an isolated nucleic acid molecule EPO

                                                                                                                           The invention comprises the amino acid and coding sequences of rice stress-related proteins. The DNA and protein sequences of the invention are useful for regulating and controlling plant maturation and development, including proliferation, seenscence, disease-resistance, o stress response. They are also useful for producing transgenic plants having improved properties, e.g. tolerance to pests, herbicides, or biotic or abiotic stresses, improved nutritional value, increased yield or proliferation, or improved structure causing less loss from lodging shattering. The present amino acid sequence represents a rice stress-related protein of the invention.

cc acid molecule containing a nucleic acid sequence containing the nucleic acid sequence containing an uncleic acid sequence conding the novel amylo cell containing the nucleic acid sequence; a cell containing the nucleic acid sequence; biological tissue containing the nucleic acid sequence; a foodstuff, a food additive or a modifier of foodstuff containing the nucleic acid sequence; a foodstuff, a food additive or a modifier of foodstuff containing the nucleic acid sequence; a computer readable recording ce encoding the mino acid sequence of the nucleic acid sequence ce encoding the amino acid sequence of the novel amylo maltase polypeptide; and a cyclic glucan obtained by reacting the novel amylo maltase polypeptide; condictiffs such as cooked rice, Japanese confectionery, snacks, bakeries, noodles, Chinese dumpling, shao-mai, fishery kneading goods, crefrigerating foods, baby foods, pet foods, pet foods, pet foods supplements, where the method involves adding the novel amylo maltase polypeptide to the foodstuff before or immediately after heat concessing of the raw material, where the novel amylo maltase polypeptide is useful for manufacturing glucan which has a cyclic glucan from the starch of the foodstuff. The novel amylo maltase polypeptide is useful for manufacturing glucan which has a cyclic structure of (alpha)-1,4-glycoside linkage, foodstuff materials and food additives, modifier of foodscuffs, a drink or eatable composition. Infinsion solution or composition for adhesion where the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          snack; noodle; Chinese dumpling; shao-mai; fishery kneading; refrigerated; baby food; pet; animal feed; drink; food supplement; cyclic glucan; Synechocystis sp. PCC 6803.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel amylo maltase polypeptide comprising amino acid sequence of a wild-type amylo maltase with a substitution, addition or deletion at a position, where the amino acid residue interacts with acarbose of amino acids other than the wild-type amylo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New mutated amylo maltase polypeptide having increased enzyme activity and reduced hydrolyzing activity, useful for manufacturing foodstuffs such as Japanese confectionery, noodles, baby foods, and food additives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ADQ15026 standard; protein; 505
                                                                  method involves reacting the saccharide containing the linear structure of (alpha)-1,4-glycoside linkage or its derivatives with the novel amyle maltase polypeptide. This sequence represents a Synechocystis sp. PCC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 2004-528719/51.

                                                                                                                                                                                  The invention describes a new isolated nucleic acid encoding a Klebsiella pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae polypeptide of the invention
                                                                                                                                                                                                                                                                                                                     New nucleic acid encoding a Klebsiella pneumoniae polypeptide, useful for preparing a vaccine composition against Klebsiella pneumoniae.
                                                                                                                                                                                                                                                                                                                                                             WPI; 2003-895346/82.

GENERAL INFORMATION:
APPLICANT: Dumas Milne Edwards, J.B.
APPLICANT: Duclett, A.
APPLICANT: Giordano, J.Y.
APPLICANT: Giordano, J.Y.
FITTE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.
Patent No. 6783961
PALENT NO. 5783961
PILE REFERENCE: 59.US2.REG
CURRENT APPLICATION NUMBER: US/09/513,999C
CURRENT FILING DATE: 2000-02-24
PRIOR APPLICATION NUMBER: US 60/122,487
PRIOR APPLICATION NUMBER: US 60/122,487
PRIOR FILING DATE: 1999-02-26
NUMBER OF SEQ ID NOS: 36681
SOPTWARE: Patent.pm
SEQ ID NO 5489
RESULT 6
US-09-248-796A-21116
US-09-248-796A-21116
; Sequence 21116, Application US/09248796A
; Sequence 21116, Application US/09248796A
; Patent No. 6747137
; GENERAL INFORMATION:
; APPLICANT: Keith Weinstock et al
; APPLICANT: Keith Weinstock et al
; TITLE OF INVENTION: NUCLEIC ACID AMD AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICANS
; TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
; TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                       GRGANISM: Myxococcus xanthus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 13
                                                                                                                                                                                                                                                                                      Sequence 11029, Application US/09489039A
Patent No. 6610836
GENERAL INFORMATION:
APPLICANT: Gary Breton et. al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709.2004001
FILE REFERENCE: 2709.2004001
CURRENT FILING DATE: 2000-01-27
PRIOR APPLICATION NUMBER: US/09/489,039A
CURRENT FILING DATE: 2000-01-27

Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NOS: 33142

Patent No. 6599294
GENERAL INFORMATION:
APPLICANT: Griffais, R.
TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments
TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, preventing of INVENTION; and treatment of infection
FILE REFERENCE: 9710-003-999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NUMBER OF SEQ ID NOS: 6849

GENERAL INFORMATION:
APPLICANT: Lynn Doucette-Stamm et al.
FITLE OF INVENTION: Nucleic Acid and Amino Acid Sequences Relating to Streptococcus
FITLE OF INVENTION: Pneumoniae for Diagnostics and Therapeutics
FILE REFERENCE: PATH00-07A
CURRENT FILING DATE: 2000-05-26
PRIOR APPLICATION NUMBER: US 09/107,433
PRIOR FILING DATE: 1998-06-30
PRIOR APPLICATION NUMBER: US 60/085,131
PRIOR FILING DATE: 1998-05-12
PRIOR APPLICATION NUMBER: US 60/085,131
PRIOR FILING DATE: 1998-05-12
PRIOR APPLICATION NUMBER: US 60/085,131
PRIOR PILING DATE: 1997-07-02
NUMBER OF SEQ ID NOS: 5322
SEQ ID NO 3650
LENGTH: 388
TYPE: PRT
